STATEMENT OF INSPECTION

Amherst, Mass.,  
October 1, 1937.

TO WHOM IT MAY CONCERN:

This is to state that we have examined for trueness to name all the saleable apple stock of Wallingford Nurseries, Wallingford, Connecticut and as they now stand in the nursery row all varieties are, to the best of our knowledge and belief, true to name.

J. K. Shaw,  
Research Professor of Pomology.

NON-WARRANTY

We strive to avoid mistakes, but in the event that any nursery stock sold by us should prove untrue to the label under which it is sold, provided notice and proper proof are furnished to the seller, the seller shall, at the option of the buyer, either refund that portion of the order which was mislabeled, by another delivery of stock or refund the purchase price. But in any case the seller is not to be held responsible for a sum greater than the original selling price of such stock. All sales or agreements to sell are made subject to shortage of nursery stock from fire, frosts, drought, or other causes beyond control of the sellers.

APPLICATION OF PRICES

Customers may select 5 of any kind (such as 5 peach) at the 10 rate, 50 at the 100 rate, 500 at the 1000 rate.

DISCOUNT

5% discount may be deducted on all orders where the total amount is remitted with the order and this is sent before April 1st.

Sterling Junction, Mass., June 9, 1937.

Gentlemen:

The stock arrived in good condition and is doing exceptionally well.

Yours very truly, John A. Davis & Sons.

Hammonton, N. J., September 20, 1937.

Dear Sirs:

The trees I ordered for last spring are doing well. Did not lose one.

Sincerely yours, Anthony Rodi.

SIZE OF TREES

Caliper or diameter governs the size of all fruit trees except 1-year apple. Height is only approximate.

STANDARD APPLE TREES  
ORDER EARLY

Permanent apple trees are usually planted about 40 feet apart. Some growers prefer more, some a little less. Some also use fillers, such as peach trees, or early bearing varieties of apples, making them 20 feet apart, or if planted only in the center of the 40-foot space the distance will be 28 feet. As the trees begin to crowd, taking out one-half will leave them 28 feet apart and later when the remaining fillers are removed, the distance will be 40 feet. Thus an income can be had for many years, when the permanent trees will need only a portion of the land.

Two years old 1/2 in. and up Baldwin Trees.

We are selling only apple trees of our own growing and every tree offered by us has had Dr. Shaw's inspection.

There is an extreme shortage of many kinds of fruit trees this year and those desiring to plant should place their orders as early as possible and have the trees reserved. Time when shipment is wished may be specified but the early placing of orders is particularly important.

We have a limited quantity of 4-year old transplanted apple trees of 1-inch diameter and approximately 7-8 feet in height, in certain varieties. Since the quantity is quite limited and such unsold varieties may be available this week and sold next, we are not listing them. Anyone interested in this size should correspond for latest balance list. Price is \$1.50 each.

PRICES

	Each	Ten	100
2 and 3 yr. 1/2 in. cal. and up 5-7 ft.	\$0.75	\$6.00	\$45.00
2 and 3 yr. 3/4-1/2 in. cal. 4-6 ft.	.65	5.00	40.00
2 and 3 yr. 7/8-1/2 in. cal. 3 1/2-5 ft.	.50	4.00	35.00
1 yr. 4-5 ft.	.65	5.00	40.00
1 yr. 3-4 ft.	.50	4.00	35.00
1 yr. 2-3 ft.	.40	3.00	25.00
1 yr. 1 1/2-2 ft.	.30	2.50	20.00

Baldwin. Large red winter apple. Known by all. The heavy mortality in older orchards from the severe winter of 1934 most certainly will result in decreased production for years. In good Baldwin sections, why not plant Baldwin?

Cortland. Very similar to McIntosh in flavor. Larger, darker red, ripens two weeks later, hangs to tree better and well worth planting.

Red Strain Delicious. A bright red strain, colors early and considered much superior to common Delicious.

Duchess. Striped red. Early August. Following Red Astrachan.

Early McIntosh. A cross between McIntosh and Yellow Transparent. Fruit is very similar to McIntosh in appearance, ripening about two weeks after Yellow Transparent.

Fall Pippin. Well known fall variety.

Gallia Beauty (Red Rome Beauty). Generally considered to be the best red strain of Rome Beauty. An early and annual bearer of late winter apples which retain a bright, shiny appearance until spring.

Gravenstein. Large, striped, red. August and September.

Red Gravenstein (Washington strain). Originated in the state of Washington and is said to be the best red strain of Gravenstein. The fruit is similar to Gravenstein but a darker red and very little stripe.

Kendall. (Description by New York Fruit Testing Association, Geneva, New York.)

"It is handsomely colored over the entire surface with dark red covered with a rich bloom. It has attracted more attention from fruit growers than any other new apple. Its season is about that of McIntosh, but it keeps a little longer. The apples are large, trim in outline, and possess the whitish, fine-grained flesh of McIntosh. The apples hang better than McIntosh but not as well as Cortland. Kendall promises to be the 'apple of apples' in the McIntosh season."

Lodi. This is an introduction of the New York Fruit Testing Association at Geneva. The fruit has the same color as Yellow Transparent, ripens at the same season, but will average over twice as large.

Macoun. (Description by New York Fruit Testing Association, Geneva, New York.)

"Just as Early McIntosh advances the season for the McIntosh type of apple, Macoun produces a late crop of these red-skinned, white-fleshed, richly flavored, aromatic apples. The season of Macoun is from one to two months later than that of McIntosh with Cortland midway between. In shape, the fruits of Macoun are similar to those of McIntosh; the color is a darker red, less striped, and with a heavier bloom; the flesh is much the same in color, texture, flavor and aroma. The trees bear regularly and heavily."

McIntosh. Known by everyone. Season of picking, last of September.

Melba. One of the newer varieties. Similar to Duchess in season and markings, but better quality and larger.

Milton. Of McIntosh type, ripening two to three weeks before McIntosh. The fruits are covered with a pinkish red and is a most attractive variety. Flesh is white, tender, crisp, juicy and of McIntosh flavor and aroma.

Northern Spy. Well known early winter, red variety.

Opalescent. Very large, red apple. Fall.

Red Astrachan. Best, early red apple. August 1st.

Red Rome Beauty. See Gallia Beauty.

Red Spy. A sport of Northern Spy. Similar in all respects to Northern Spy except in coloring in which it much surpasses its parent, having a solid red.

R. I. Greening. Fine dessert variety. Early winter.

Roxbury Russet. Very late winter russet apple.

Stayman Winesap. Standard winter apple in New Jersey. A good variety for late winter in some sections of New England. Large, red apple.

Wagner. Great filler variety. Bears young. Red, early winter.

Wealthy. Fine filler variety. Often bearing fruit in the nursery at two years of age. Red. Late August.

Yellow Delicious. We have a very limited quantity of this handsome, fine flavored yellow winter variety. Priced at single rates only.

Hyslop Crab. Very productive. Red.

PEACH TREES

For several years, planting of peach trees in Northeastern United States has been much below normal which of course means that production for the next few years must be comparatively low and therefore prices better. The far sighted orchardist will not wait for over production which will eventually follow years of shortage. Our supply of peach trees is less than usual this year. Warning, order early.

PRICES

	Each	Ten	100
1/2 in. cal. and up 5-7 ft. (Extra large grade)	\$0.75	\$6.00	
3/4-1/2 in. cal. 4-6 ft. (Standard No. 1 grade)	.50	4.00	\$30.00
5/8-3/4 in. cal. 3 1/2-5 ft.	.40	3.00	25.00
6/8-7/8 in. cal. 2 1/2-4 ft.	.30	2.50	20.00
2-3 ft.	.25	2.00	15.00
1 1/2-2 ft.	.20	1.50	10.00

TIME OF RIPENING IS FOR CONNECTICUT CONDITIONS

Greensboro. August 1st. Medium size. White flesh. Very productive.

Mikado. (June Elberta) August 1st. A very handsome roundish variety. Yellow flesh—excellent quality.

Buttercup. August 3rd. Very similar to Mikado, but slightly larger.

Marigold. August 8th. Yellow, semi-free, ripening at a time which is very desirable, filling a season where there has usually been a slight break.

Oriole. August 10th. Nearly free, yellow and starts to ripen just ahead of Golden Jubilee.

Carman. August 15th. Medium to large. White. Very hardy variety.

Cumberland. August 15th. Practically free, white flesh, dark red coloring, elongated in shape, good size. Best white of its season.

Golden Jubilee. One of the outstanding introductions of the New Jersey Experiment Station. A block laden with rich golden yellow, red blushed fruit is a handsome sight. Similar to Elberta in general appearance, but a brighter golden yellow, slightly smaller size and much better flavor.

Eclipse. August 25th. Medium size, yellow freestone, red cheek.

South Haven. August 25th. A very large yellow freestone of Michigan origin. Tree is thrifty and productive.

Belle of Georgia. September 1st. Probably the best known and most popular of white varieties.

Early Elberta. Ripens just ahead of regular Elberta. Lighter yellow and brighter red, otherwise similar to Elberta.

Elberta. September 4th. Known to all. King of Peaches.

J. H. Hale. September 8th. The tree is not a very strong grower, but the fruit of well grown J. H. Hale are immense, handsome and of excellent flavor.

Comparative sizes of our 1/2, 3/4 and 1 1/2 in. Peach Trees.

Salt Point, New York, April 13, 1937.

Gentlemen:

Trees arrived in fine shape. Nice clean thrifty stock.

Yours very truly, Lewis S. Ring.

Gentlemen:

Received my trees today and am satisfied with order.

Yours truly, Willet H. Parlman.

Gentlemen:

Stock arrived today. All fine and strong.

Sincerely yours, W. E. Kling.

Gentlemen:

I ordered from you 130 trees in April and they are doing fine.

Yours very truly, Carl W. Lenden.

OUR PATRONS WILL GREATLY OBLIGE US BY USING THIS
